System description

1. General

CALPEX is the protected name for a flexible pipe system of Brugg Pipesystems, especially for the low-temperature range and is produced according to the current standard (EN 15632-1/-2). CALPEX PUR-KING, the district heating pipe, and CALPEX SANITARY, the service water pipe, are intended for use in small and medium-sized district and local heating networks as well as in industry and agriculture, in drinking water supplies, sewage systems, chillers and in swimming pool technology.

The CALPEX systems consist of a carrier pipe made of cross-linked polyethylene PEXa and are equipped with an organic oxygen diffusion barrier (EVOH).

The carrier pipe was selected or integrated into the standards because it has excellent thermal and mechanical properties. The corrosion-resistant, chemically resistant material is very robust and can very easily be processed by hand.

The thermal insulation of CALPEX PUR-KING consists of a patented flexible polyurethane rigid foam with excellent thermal insulation properties. This insulating material is produced by a chemical reaction. CALPEX PUR-KING has an extremely closed-cell structure, as a result of which its thermal insulation is improved considerably and remains stable for decades. CALPEX is free of harmful substances and therefore extremely environmentally friendly.

During the formation of the foam, the carrier pipes are wetted very effectively by it, resulting in a firm adhesion and a force-locking bond. The physical properties of the PEXa pipe combined with the insulation bond allow installation without having to take thermal expansion into account.

The ability to bend the CALPEX systems allows them to be adapted to all conditions along the pipe route with ease. Existing supply lines can be crossed by going under or over them; obstacles can easily be bypassed. With CALPEX systems, users can choose the shortest pipe route without the restrictions required by the classical method of pipe construction.

The CALPEX systems are delivered to the construction site in the desired length, in endless rings, or on a cable drum. Long delivery lengths enable pipes to be laid in the ground largely without joints. This means that the pipe trench can be considerably narrower. This allows considerable savings to be made in civil engineering work. This applies in particular to DUO lines.

If one also considers the very short installation time, the CALPEX systems are not only a technically perfect solution, but also the key to the time and cost-saving creation of district heating or service water networks due to the reduced amount of coordination work required on site and the quick and easy installation.

Assembling the connection pieces could hardly be easier. With conventional screw connections, press fittings or electrofusion couplers, the connections are quickly and safely installed. The wide range of accessories ensures that solutions can be chosen for every possible situation.

2. Range of applications

Heating, pipe series 5 (SDR 11):

Max. temp. for continuous operation T_{Bmax} : 80 °C
 Max. permitted operating temp. T_{max} : 95 °C (fluctuating)
 Max. permitted operating pressure p: 6 bar

see sheet CPX 1.110

Sanitary, pipe series 3.2 (SDR 7.4):

Max. temp. for continuous operation T_{Bmax} : 80 °C
 Max. permitted operating temp. T_{max} : 95 °C (fluctuating)
 Max. permitted operating pressure p: 10 bar

see sheet CPX 1.110

System description

1. Bonded system

Requirements: Factory insulated, flexible pipe systems according EN 15632-1/-2
 Fire behaviour: Building material class B2 (normally inflammable) according to DIN 4102

2. Carrier pipe

Materials Basic material: High-density polyethylene (PE-HD), peroxide cross-linked (PEXa), colour: natural
 Bonding agent PE-modified, heat-stabilized, colour: red (heating), silver (sanitary)
 Oxygen barrier layer Ethylene / vinyl alcohol (EVOH), heat-stabilized, colour: natural
 Requirements As per DIN 16892 / DIN 16893 and E DIN EN 12318-2, pipes in series 3.2 as per DVGW worksheet W 544
 Impermeability to oxygen As per DIN 4729 at 40 °C, oxygen permeability based on the interior pipe volume as per DIN 4726 from $\leq 0.10 \text{ g}/(\text{m}^3 \times \text{d})$
 Pipe series DIN 16893 Series 5 (SDR 11): for CALPEX PUR-KING (with EVOH barrier)
 Series 3.2 (SDR 7.4): for CALPEX SANITARY (with EVOH barrier)
 Long-term behaviour See catalog sheet CPX 1.110
 Properties Unaffected by aggressive water; low pressure losses; very good chemical and mechanical resistance (DIN 8075 sheet 1)

PEXa carrier pipe	Reference temperature °C	Value	Test standard
Density	-	932 - 935 kg/m ³	ISO 1183
Thermal conductivity	-	0.38 W/mK	in Anlehnung an ASTM C 1113
Tensile strength	20	min. 18 N/mm ²	ISO 6259
Tensile strength	80	min. 8 N/mm ²	ISO 6259
Linear expansion coefficient	20	$1.4 \cdot 10^{-4} \text{ 1/K}$	-
Linear expansion coefficient	100	$2.0 \cdot 10^{-4} \text{ 1/K}$	-
Crystallite melting range	-	128 - 134 °C	-
Chem. resistance	20 / 40 / 60	-	DIN 8075 B.1

3. Thermal insulation

Materials: **CALPEX PUR-KING (heating 6 bar)**
 CFC-free, cyclopentane-blown polyurethane foam (PUR)
CALPEX SANITARY (sanitary 10 bar)
 CFC-free, 100 % CO₂-blown polyurethane foam (PUR)

PUR insulation	Reference temperature °C	CALPEX PUR-KING	CALPEX SANITARY	Test standard

1 MPA = 10 bar

Long-term behaviour: (table)

The values have a safety factor of 1.25 and are based on a series of measurements covering an average of 32,000 hours. They can be compared with Table 5 as per DIN 16893. All values have been tested and confirmed by the competent organizations in various countries. The max. operating temperature is 95 °C but considers a short-term over temperature (fault temperature) of 110 °C.

A typical fluctuating temperature distribution for the flow in a district heating system gives an average temperature/year of approx. 66 °C.

Lifetime calculation using Miner's Rule

Lifetime calculation for fluctuating operating temperatures will be calculated acc. EN ISO 13760.

Example of application

The basis is a typical temperature collective over one year, with fluctuating operation. (gem. EN 15632-2)

1 year = 365 days = 8760 hours.

Operating Temperature °C	Example 1 Annual Operating time h	Example 2 Annual Operating time h	Example 3 Annual Operating time h
95	3,3	0	0
90	292	50	50
85	0	100	1000

Surface roughness $\epsilon = 0.007$ mm (PEXa)

(1 mmWS = 9.81 Pa)

$\dot{m} \approx \frac{Q \cdot 860}{\Delta T}$	\dot{m} =	Flow rate in kg/h
	Q =	Power requirement in kW
	ΔT =	Temperature difference VL (flow)/RL (return) in °C

H 40 + 40/S 40 + 25/162	0.2279	9.12	10.26	11.40	12.53

Type of installation for QUADRIGA: 1-pipe, laid in the ground

- Cover above pipe: H = 0.80 m
- Ground temperature: T_E = 10 °C
- Soil conductivity: λ_E = 1.0 W/mK
- Conductivity of PUR foam: λ_{PU} = 0.0234 W/mK
- Conductivity of PEXa pipe: λ_{PEX} = 0.38 W/mK
- Conductivity of PE pipe: λ_{PE} = 0.33 W/mK

Heat loss during operation:

- q = U (T_B - T_E) [W/m]**
- U = Heat transfer coefficient [W/mK]
- T_B = Average operating temperature [°C]
- T_E = Average ground temperature [°C]

CALPEX QUADRIGA - heat loss during operation

Example of calculation for average operating temperature T_B [°C]

- Flow - heating: 70 °C
- Return - heating: 40 °C
- Flow - sanitary: 60 °C
- Return - sanitary: 50 °C

$$T_B = \frac{70^\circ + 40^\circ + 60^\circ + 50^\circ}{4} = 55^\circ\text{C}$$

Planning and connection technology

CALPEX SANITARY (Heating strip)

1. Requirements for heating strip

1.1 Minimum power

Type CALPEX UNO	In relation to a maintained temperature of:		
	40 °C	50 °C	60 °C
32/111	5.8 W/m	7.8 W/m	9.6 W/m
40/126	6.3 W/m	8.3 W/m	10.4 W/m
50/126	7.3 W/m	10.3 W/m	12.8 W/m

1.2 Recommendations for heating strip

Hot water:

HWAT-R from Tyco Thermal Controls N.V. meets the requirement for Ø 50/126, 60 °C
Automatic power adjustment with HWAT-ECO

Frost protection:

FS-B-2X from Tyco Thermal Controls N.V. requires thermostat with temperature sensor, UTR15

Max. heating circuit length in relation to a cut-in temperature of 12 °C (HWAT) or 0 °C (FS-B-2X)		
Heating strip type	Fuse	Length Lmax
HWAT-R	13 A	60 m
	16 A	80 m
	20 A	100 m
FS-B-2X	10 A	65 m
	16 A	105 m

Fuse protection using automatic cutouts with characteristic C

2. Joint

3. T-branch

For the T-branch, note that the sum of two connected pipes must not be $> L_{max}^*$. T-switches **cannot** be supplied.

* L_{max} = max. permitted length for heating strip

The heating strip and the accessories are installed by the electrician!

House entry bend, 90°

CALPEX PUR-KING UNO (Heating 6 bar)

Note: CALPEX shells are not suggested to be installed UV exposed!

CALPEX shells are not suitable for use with CALPEX QUADRIGA (distribution chamber: see CPX 1.350).

Structure of the half-shell

- 1 ABS half-shells
- 2 PEX coupling; see CPX 1.390
- 3 Sealing clamps (14 pcs.)
- 4 Insulation material; see CPX 1.365
- 5 Glued surface
- 6 Reduction ring or sealing ring
- 7 Hose clip

CALPEX Big I-shell

Dimensions Ø 142 - 182 mm

CALPEX Big I-shell, UNO/DUO/QUADRIGA

Outer casing Ø d1	Ø d2		
	142	162	182
142	x		
162	x	x	
182	x	x	x

Note: CALPEX shells are not suggested to be installed UV exposed!

Distribution chamber: see CPX 1.350

CALPEX Big-shells are freely reducible from Ø 182 mm to Ø 76 mm

Structure of the half-shell

- 1 ABS half-shells
- 2 PEX coupling; see CPX 1.390
- 3 Sealing clamps (22 pcs.)
- 4 Insulation material; see CPX 1.365
- 5 Glued surface
- 6 Reduction ring or sealing ring

CALPEX T-shell

Dimensions Ø 76 - 126 mm

CALPEX T-shell, UNO/DUO

Outer casing Ø d1 - Ø d3	Branch, Ø d2			
	76	91	111	126
76 - 76	x	x	x	x
91 - 91	x	x	x	x

PEXa carrier pipe – made of steel on request (P235 TR 1/GH)

Connection with press connections (for coupling, see CPX 1.390)

Supplementary insulation with CPX clip shells (for CPX-I shell, see CPX 1.325/1.326)

or with shrink-on sleeves (see CPX 1.320)

Distribution chamber

Dimensions CPX 25/76 - 125/182

Distribution chamber for all joints

The distribution chamber is used to cover and protect completed BRUGG pipe joints, shut-off valves or junction branches. The distribution chamber is a watertight structure made of polyethylene; its multi-functional design makes it possible to use one chamber type for all pipe dimensions.

Wall thickness approx. 8 mm

Figures in mm

Ø Chamber exit	Pipe dimensions (outer diameter)	
Ø outer, 206 x 8 mm	Leadthrough for outer Ø	Ø 182, 162*
Ø outer, 166 x 8 mm	Leadthrough for outer Ø	Ø 142, 126*
Ø outer, 136 x 8 mm	Leadthrough for outer Ø	Ø 111, 91*, 76*

* with additional centering ring

Not available in Switzerland

Distribution chamber

Installation for dimensions CPX 25/76 - 125/182

Protective concrete plate

for distribution chamber

Schematic diagram showing installation of cover plate

Figures in cm

Load

The cover plate has to be used wherever there might be public traffic and for low-depth installations. The maximum load per unit of area must not exceed $q = 153 \text{ kN/m}^2$ (SLW 60 to DIN 1055).

Installation method

Correct installation of the sand must be ensured so that the plate can perform its function as a load shield for the inspection chamber. A Proctor density of $dpr = 96\%$ should be the target for compaction. For subsequent work on the inspection chamber, the cover plate has lifting eyes. After completing the work and refilling the pit, make sure that the infill between the inspection chamber and concrete slabs is restored correctly.

Filling/insulation material

Some suggestions for filling and insulation materials that can be used are listed below:

- Bulk polystyrene material
- Armaflex or Tubolit
- Foam using BRAG PUR foam canister

Note

There is no need to use filling material in the distribution shaft. Likewise, it is not essential to insulate the pipes! The decision is up to the customer.

Note

The plate must be located so that it completely covers the chamber below (see illustration).

Armouring

Figures in cm

- 1 Q 221 bottom
- 2 Q 131 bottom
- 3 17 x Ø 10/20 mm (L = 0.5 m)
Total length 8.5 m
- 4 3 x Ø 12 mm (L = 0.85 m)
Total length 2.55 m

$$7.5 \frac{21}{21.5}$$

$$\frac{21}{16} \frac{12}{15}$$

Insulation material

PE foam (CPX 25/76 - 110/182), PUR foam container(s)

PUR foam bottles (CPX 25/76 - 160/250)

Insulation material for shrink joints

Polyethylene foam tube, (CPX 25/76 - 110/182)

Extruded pipe insulation made of closed-cell polyethylene, excellent for insulating CALPEX shrink joints (not for CALPEX shells). Various thicknesses of insulation are available for the most common pipe diameters.

The insulation material (thickness and length) is supplied for the relevant joint types.

The insulation must be fitted precisely into the joints on site.

PUR foam for shrink joints and CALPEX shells (CPX 25/76 - 160/250)

CFC-free, cyclopentane-blown PUR foam in plastic bottles

The required quantity of CFC-free polyurethane foam is delivered in suitable container sizes for the various joints and T-pieces. The components are supplied separately in two bottles and are only mixed together when needed. Please note the safety regulations in the installation instructions supplied with the product.

Safety regulations

Protective goggles and gloves must be worn when using this product.

Synthetic gloves

Protective goggles

With additional centering ring

Core bores

Perfect bores are required for installation. As hairline cracks may be present in the concrete or result from drilling, it is advisable to seal the entire length of the borehole with suitable sealant (such as AQUAGARD).

Tightness can only be guaranteed if this recommendation is followed.

Trench profile, 4 CALPEX pipes

Figures in cm

- 1 Pipe warning tape; see sheet CPX 1.430
- 2 Excavated material
- 3 Fill material see below

Installation depth:
 Max. installation depth: 2.6 m
 Our approval is required for installation at greater depths.

SLW 30 $\hat{=}$ 300 kN total load as per DIN 1072; if subject to higher traffic loads (e.g. SLW 60), a load-distributing superstructure as per RSt075 is required.

With no traffic load, the minimum trench depth **T** can be reduced by 20 cm.

The fill material in the embedment must comply with EN 13941-2 and satisfy the following minimum requirements:

- Friable, round-edged sand-gravel mixture
- Permissible grain size: 0...8 mm
- Coefficient of uniformity according to DIN EN ISO 14688-2 larger than 1.8
- Maximum 10 percent by mass \leq 0.075 mm
- Maximum 3 percent by mass \leq 0.02 mm
- Proctor density min. 94%; optimal 97 up to 98%

Pipe warning tape

CALPEX pipe warning tape

Pipe warning tape to be laid in the ground.
Roll length: 250 m

CALPEX trench structure

- 1 Pipe warning tape
- 2 Excavated material
- 3 Washed sand

Installation depth; see sheet CPX 1.505

Laying tools

Using the CALPEX unwinding device and the CALPEX – power winch makes it possible to easily and quickly unroll and lay the flexible composite pipe systems.

CALPEX-Unwinding device

Dimension: Ø 400 x 157 cm
Load capacity: 1'000 kg

Power winch

Our recommendation:
<https://www.portablewinch.com>

CALPEX-Squeezing device

for temporary closing up PE- and PEX-pipes

Squeezing device Ø 32 – 63 mm (SDR11)

Squeezing device Ø 75 - 160 mm (SDR11)

Connection (rigid/flexible)

CALPEX to insulated steel pipes

Installation instructions for transition from CALPEX to insulated steel pipe (KMR)

1. Junction with T-piece

The transverse expansion ΔI must not exceed the expansion that can be accommodated by junction pipe DS and the CALPEX pipe.

2. Transition with fixed point

Figures in m

The thermal movement ΔI of the insulated steel pipe cannot be compensated by the CALPEX pipes. A fixed point must be installed.

3. Transition with Z-bend

Static design of the Z-bend according to expansion variable ΔI .

- ΔI = Thermal movement
- FP = Fixed point (plastic casing pipe)
- DK = Expansion pad

4. Transition with expansion bend

Figures in m

If pipe length L or ΔI is more than permitted for $L1$, a fixed anchor point must be installed.

- Design of expansion components
- Positioning of expansion pads as per the section on PREMANT

Installation of house entry

1 Mark the distance (x, y, z) + 1 cm from the end of the pipe.

2 Cut the casing pipe with saw.

3 Split the casing pipe with knife.
Note: Don't damage the carrier pipe!

4 Peel off the casing.

5 Cut back/remove the insulation along length (X, Y, Z).
Note: Don't damage the carrier pipe!

6 Install the wall sealing ring.

7 Carefully shrink on the pipe end closure according to the Raychem DHEC installation instruction.

8 Install the fitting as per the enclosed installation instructions.

Installation tools

general and for screwed connector

Cut to length and strip insulation

The saw is used to cut the casing pipe and the insulation

Knife to split casing and remove insulation

Hammer as auxiliary tool

Fit of connection piece

Pipe cutter for PEX pipe

Spanner wrench

Shrink procedure

The gas burner is used to shrink hoses and joints

It is recommended that gloves are worn for shrinking work.

Cleaning products and cleaning cloths

Flat bit for cutting filler hole

Installation tools

for press fit joints

Manual tool for PEX Ø 22 - 40 mm (packed in one case)

Expander tool, up to Ø 32 mm
(basic tool)

Press tool, up to Ø 40 mm
Expander tool for Ø 40 mm
(basic tool)

Case with basic tool
including head and yoke

Expander head, up to Ø 32 mm

Expander head, over Ø 40 mm

Press yoke, Ø 22 - 40 mm

Hydraulic tool for PEX Ø 50 - 110 mm (packed in two cases)

Hydraulic press and expander tool
Ø 50 - 110 mm including foot pump (basic tool)

Case with basic tool
(without heads and yoke)

Expander head
Ø 50 - 110 mm

Press yoke
Ø 50, 63 mm

Reducer Ø 75/90 mm
for yoke, Ø 110 mm

Case with expander heads
and press yoke

Electro-hydraulic tool for PEX Ø 125 - 160 mm (packed in two cases)

Hydraulic press and expander tool
Ø 125 - 160 mm including foot pump (basic tool)

Case with basic tool
(without heads and yoke)

Expander head
Ø 125 - 160 mm

Press yoke
Ø 140 mm, 160 mm

Reducer Ø 125 mm
for yoke, Ø 160 mm

Case with expander heads
and press yoke

Heating strip, CALPEX SANITARY (Sanitary, 10 bar)

Drawing in, sensor, joint

1. Pulling through the heating strip

1. Unroll the pipe so that it is straight, next to the trench (without bends). See also CPX 1.120. Shorten the casing and cut back the channel. From one end, push the glass fibre wire (ø 6.5 mm) through the channel. The heating strip can be pushed in for straight lengths of up to 30 m.

2. Connect the heating strip or pull cord to the wire (drill a hole in the strip) and pull through the heating strip.

2. Installation of the temperature sensor for frost protection

The temperature sensor has to be installed on the carrier pipe, opposite the heating strip. It must be installed at the coldest point of the pipe (outside the building). For this purpose, cut open an area of the casing measuring 10 x 7 cm and peel it off, cut open 10 x 7 cm of foam, fix the temperature sensor onto the carrier pipe with adhesive tape, fill the hole with the insulation material supplied, apply filling adhesive S1113 below and above the temperature sensor cable (see Detail B), and seal with the sealing set.

3. Remove the insulation

Shorten the casing by 120 mm and cut off the exposed channel.

4. Joint

Through connection $L \leq L_{max}^*$
Feed in from one end

Separate of heating strips $L > L_{max}^*$
Feed in from both end (each strip $\leq L_{max}$)

Protect the heating strip against moisture

* L_{max} = max. permitted length for heating strip

The heating strip and the accessories are supplied and installed by the electrician!
